Thanks for the message. Unfortunately it looks like we will not be
renewing our CM support contract and will try to sell our CM-2.

I will get back in touch with you if this changes.

- Morrow

Barbara Lincoln informs me you are interested in the new Seeker RAM Information Retrieval system we've build for the Connection Machine.

How would you like me to deliver it to you? The software is available as a set of binary executables for a Sun4/CM-2 running SunOS 4.1 and CMSS 6.1. The archive runs about 3 Megabytes (compressed). I can uuencode, split and mail it to you, we can use FTP, or we could mail you a QIC-150 cartridge tape. Whatever is easiest, let me know.

We would be interested in running this software on our CM-2.

How do we go about acquiring it?
